1. What This System Does

The Smart Metering Portal automatically collects water-usage readings from smart meters installed at customer premises. Your job as a billing clerk is to **review those readings, approve the correct ones, and post them to the billing system** so invoices can be generated.

2. Logging In

Open the billing portal

Go to <https://billing.hargeisawatertech.com> in your browser.

Enter your credentials

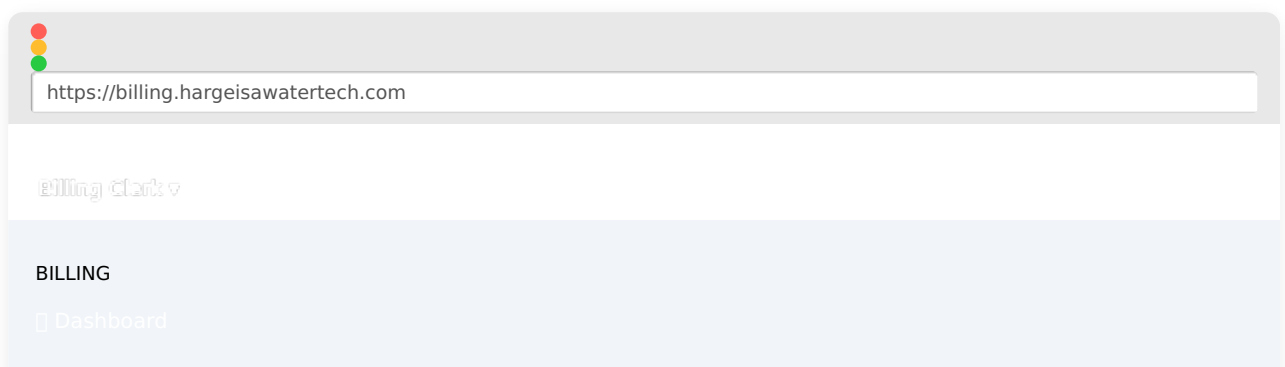

Type your username and password, then click

Sign In

.

You will see the Billing Dashboard

The dashboard shows recent readings and a summary of posted, pending, and failed records.

□ Readings

□ Reports

△ Alarms

Recent Readings

Dev EUI	Supply No	Reading (m³)	Time	Status
03280830	J - 28 - 380	100.621 m³	Jul 8, 2026	
04110922	A - 10 - 229	101.825 m³	Jul 7, 2026	Pending
07654312	B - 05 - 112	52.789 m³	Jul 7, 2026	Pending

3. The Reading Workflow

Every reading goes through the following statuses:

Pending

Reading received but not yet reviewed

Review and either **Post** or **Reject**

Successfully sent to billing

None — invoice will be generated

Queued

Approved but billing server temporarily unavailable; will retry automatically

Check back later; no manual action needed

Clerk rejected the reading (e.g., abnormal value)

Contact field team to re-check meter

4. Reviewing a Single Reading

Go to Readings

Click

Readings

in the left sidebar.

Find the reading

Use the search filters (Supply No, date range) to locate the reading you want to review.

Click the reading ID

This opens the detail view showing all information about the reading.

https://billing.hargeisawatertech.com/billing/readings/view?id=65500

Reading #65500

Id	65500
Dev EUI	03280830
Supply No	J - 28 - 380
Reading Value	100.621 m³
Reading Time	Jul 8, 2026, 12:08:09 AM
Source	rest-sync
Status	Pending
Created At	Jul 8, 2026, 12:12:27 AM

What to check before posting:

- The **Supply No** matches the customer's account number.
- The **Reading Value** is reasonable (not zero, not abnormally high).
- The **Reading Time** is within the current billing month.

5. Posting a Single Reading to Billing

Open the reading detail page

Navigate to Readings → click the reading ID.

Click "Post Reading"

A confirmation dialog appears: *"Post this reading to billing?"*

Click OK to confirm

The system sends the reading to the billing server using the **28th of the reading's month** as the billing date (see Section 7).

Check the result message

A green or yellow banner appears at the top of the page.

https://billing.hargeisawatertech.com/billing/readings/view?id=65500

✓ Reading posted to billing. Successfully posted meter reading.

Status

If you see a yellow warning instead of green:

The reading was approved and saved, but the billing server was temporarily unavailable. The system will retry automatically — you do not need to post again.

6. Bulk Post — Posting All Readings for a Month

At the end of each billing cycle, use the **Post to Billing** bulk action to post all approved readings for a given month at once.

Go to Readings → Bulk Actions

Look for the

"Post to Billing"

button or form at the top of the Readings list.

Select the billing month

Choose the year and month (e.g., 2026-07). The system will use the 28th of that month as the billing date.

Click "Post to Billing"

The system processes each meter's latest reading on or before the 28th.

Review the summary message

You will see how many readings were posted, failed, or skipped.

https://billing.hargeisawatertech.com/billing/readings

✓ 47 reading(s) posted for 2026-07-28, 3 skipped.

Post readings for month: 2026-07

What "skipped" means

- The reading is **zero** — zero readings are never sent to billing.
- The reading was **already posted** for this supply in a previous run.

7. The 28th Billing Date Policy

Company Policy

HWA uses the

28th of each month

as the official billing date for all meter readings. This applies whether you post a single reading or run the bulk post.

What this means in practice:

Reading was taken *on* the 28th

Posted with date 2026-07-28 . No note added.

Reading was taken on a *different day* (e.g. the 7th)

Posted with date 2026-07-28 . A description note is added: *"No reading on 2026-07-28; used last available reading from 2026-07-07."*

No reading exists on or before the 28th

The reading is skipped for that month's bulk post.

You do not need to do anything special.

The 28th billing date is applied automatically — you just click "Post Reading" or "Post to Billing" as usual.

8. Understanding Status Messages

✓ *Reading posted to billing. Successfully posted meter reading.*

The billing server accepted the reading and will generate an invoice.

None required.

✓ *X reading(s) posted for 2026-07-28, Y skipped.*

Bulk post succeeded. Y readings were skipped (zero or already posted).

None required.

<i>△ Reading approved, but the billing push failed and will be retried.</i>	The reading was saved locally. The billing server was temporarily unavailable. The system will retry.	Wait and check again later. Do not post again.
<i>△ X posted, Y failed (queued for retry), Z skipped.</i>	Partial success in bulk post. Failed readings will be retried.	Inform your system administrator.
<i>✖ Zero reading; not posted to billing.</i>	The meter reported 0 m ³ . Zero readings are never sent to billing.	Contact field team to check the meter on-site.
<i>✖ Reading has no supply number.</i>	The meter has not been assigned a supply number.	Ask the system administrator to assign the supply number to this meter.

9. Reading Values — Liters vs Cubic Meters

Smart meters transmit their readings in **liters** internally. The portal automatically converts and displays all values in **cubic meters (m³)** for your convenience.

100,621	100.621 m ³
52,789	52.789 m ³
1,500	1.500 m ³

The billing server also receives the value in cubic meters (rounded down to a whole number).

For example, 100.621 m³ is sent to billing as

100 m³

. This is correct and matches HWA's billing formula.

10. Common Questions

Can I post the same reading twice?

No. The system checks for duplicates automatically. If a reading for a supply number has already been posted this month, it will be skipped and you will see a *"skipped"* count in the bulk post summary.

What happens if I accidentally reject a reading?

Once rejected, the reading cannot be re-posted from the portal. Contact your system

administrator to reverse the status in the database.

Why does the system show a yellow warning after I post?

The reading was approved and saved, but the billing server was temporarily unavailable. The system retries automatically. You do **not** need to post again — doing so will create a duplicate.

What does "already posted for this supply" mean?

The billing server already has a reading for this meter and month. This is normal if you run the bulk post more than once in the same month. The reading is counted as "skipped" — no action needed.

The reading value looks very different from what the field team reported. What should I do?

Click **Reject** on that reading and note the reason. Then notify your supervisor and the field team to verify the meter on-site. Do not post a reading you believe is incorrect.

I posted a reading but no invoice appeared in the billing system. What do I do?

Check the reading's status in the portal. If it shows **Posted** (green), the data has been sent — the invoice should appear in the billing system within a few minutes. If it still shows **Pending** or shows a warning, contact your system administrator.
